Executive Summary

The Medical and Health Coordination Center (MHCC) continues to be activated in response to Zika virus disease. The California Department of Public Health (CDPH) and Emergency Medical Services Authority (EMSA) are currently the only Emergency Function 08 (EF 08) partners at the state level reporting on this activation.

The MHCC is coordinating with EF 08 partners, healthcare facilities and local health departments (LHDs) to ensure responses to inquiries are timely and accurate.

CDPH and EMSA Duty Officer Programs are monitoring Zika virus disease after hours and communicating with the Regional Disaster Medical and Health Coordination (RDMHC) and the Medical Health Operational Area Coordination (MHOAC) Programs throughout California.

As of Friday, July 7, 2017, there have been 573 travel-associated Zika virus infections in California. This number reflects an increase of 12 from the 561 cases reported on the last situation report dated June 29, 2017. WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

*** Isolated Thunderstorms in Eastern Areas Today and Saturday ***

*** Windy and Very Dry East of the Cascade-Sierra Crest Monday-Tuesday ***

The 4 Corners area high will strengthen through Saturday and produce hotter and drier weather throughout all of the Northern California region except the immediate coast. In most inland areas and coastal areas above 1500 ft temperatures will be 6-12 degrees above normal and RH will drop to 8-18% this afternoon. SW-W winds will gust to 20-25 mph in eastern areas this afternoon. Isolated afternoon and evening thunderstorms are expected in eastern areas today. Saturday will be slightly warmer and drier with fewer east side thunderstorms. The thunderstorms will likely produce a mix of wet and dry lightning.

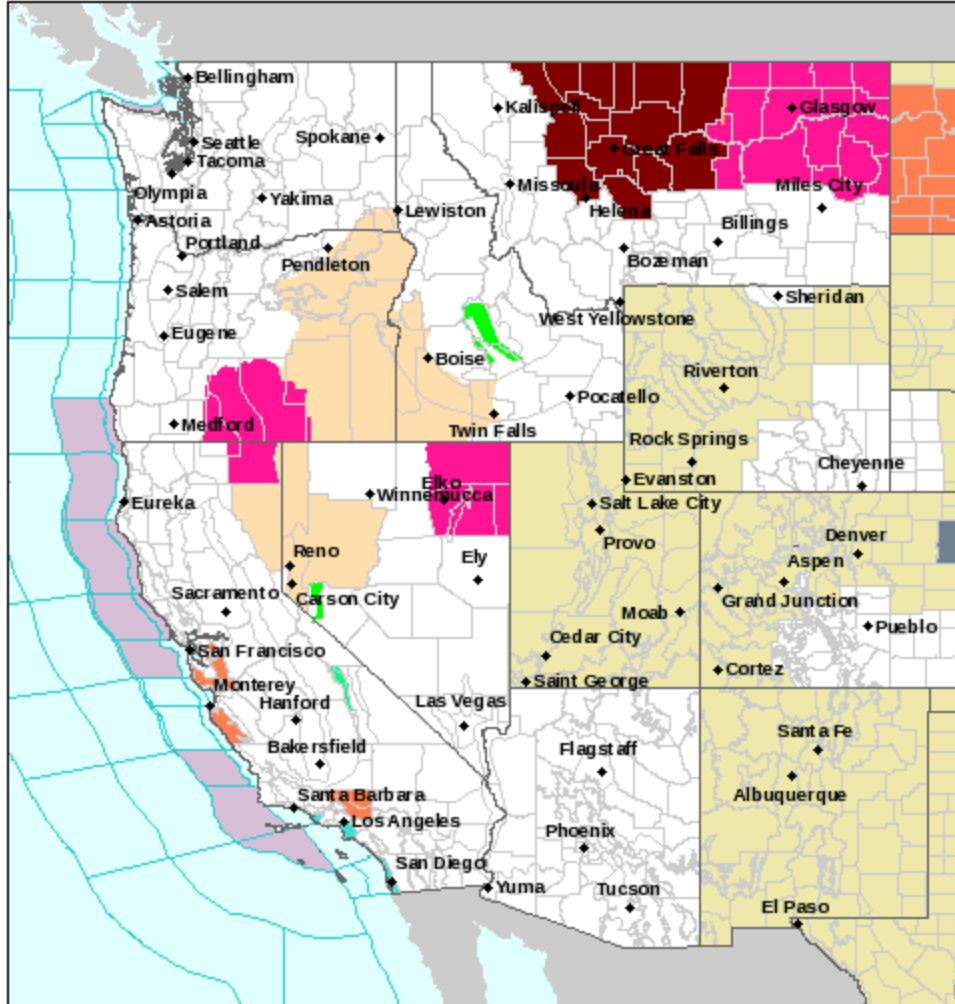

Drier SW flow is expected Sunday as an offshore low pressure trough approaches the coast. Temperatures will level off on Sunday then drop a bit early next week as it moves onshore. The main affect from this trough will be SW winds gusting to 30-40 mph and very low humidity east of the Cascade-Sierra crest on Monday and Tuesday. Later in the week the trough will weaken and high pressure will return with increasing temperatures.

SOUTHERN CALIFORNIA

Strong high pressure will sit over the Southwestern States causing temperatures to be 5 to 10 degrees above normal through the end of next week. Maximum temperatures will be in the mid 80s to mid 90s across the mountains and mid 90s to 105 in the valleys. Minimum humidity will be mainly between 12% and 25% away from the coastal areas through this weekend and then it will increase to 20% to 40% across Southern California early next week. Isolated afternoon showers and thunderstorms will form over the Sierra and Northern Deserts this afternoon and then isolated afternoon showers and thunderstorms will affect both the Sierra and the mountains and deserts of Southern California east of the I-15 corridor Saturday through early next week. At this time, models show an increase in shower and thunderstorm activity starting the middle of next week. There will be nighttime north winds of 10 to 20 mph across Santa Barbara County and the Grapevine through Sunday. Westerly winds of 15 to 25 mph with gusts to 40 mph will surface across the wind prone desert areas each afternoon and evening through the end of next week
